# **Technical Data Sheet**

# **MXCUR ® 321**

November 2013

## **Product Description**

MXCUR 321 is a medium viscosity, fast curing, single component acrylated urethane adhesive. MXCUR 321 is specifically formulated for bonding rigid or flexible PVC to polycarbonate, while not inducing stress cracking. MXCUR 321 also provides excellent adhesion to a wide variety of other substrates including glass, many plastics and most metals. MXCUR 321 cures rapidly when exposed to ultra violet radiation specifically in the UVA/visible light region light.

# MXCUR <sup>®</sup> 321 offers the following characteristics:

| Technology           | Acrylic                         |  |
|----------------------|---------------------------------|--|
| Appearance (uncured) | Transparent to slightly hazy    |  |
|                      | liquid                          |  |
| Chemical Form        | Acrylated urethane              |  |
| Cure                 | Ultraviolet (UV)/ visible light |  |
| Cure Benifit         | Production - high speed curing  |  |
| Components           | Single – requires no mixing     |  |
| Viscosity            | Medium, thixotropic             |  |
| Application          | Bonding                         |  |
| Flexibility          | Enhanced shock resistance.      |  |

## **Properties of Uncured Material**

|                         | Typical Value      |
|-------------------------|--------------------|
| Specific Gravity @ 25°C | 1.13               |
| Viscosity @ 20°C        | 2,500 to 5,000mPas |
| Refractive Index        | 1.48               |
| Flash Point             | See MSDS           |

## **UV** Intensity

**MXCUR 321** can be cured by exposure to visible light of sufficient intensity and/or UV. To obtain full cure on surfaces exposed to air, radiation @ 220 to 260 nm is also required.

#### **Stress Cracking**

Liquid adhesive is applied to a medical grade polycarbonate bar 6.4 cm by 13 mm by 3 mm which had been flexed to induce a known stress level.

Stress Cracking, ASTM D 3929, minutes:

7 N/mm<sup>2</sup> stress on bar >15

#### **Fixture Time**

Fixture time is defined as the time to develop shear strength of 0.1 N/mm². UV Fixture Time, ISO 4587, Glass microscope slides, seconds:

6 mW/cm<sup>2</sup> @ 365 nm \(\leq 20\)

UV Fixture Time, ISO 4587, Polycarbonate, seconds: 30 mW/cm² @ 365 nm 10 to 15

#### **Properties of Cured Material**

30 mW/cm<sup>2</sup> @ 365 nm for 80 seconds

## **Physical properties**

| Shore Hardness, ISO 868, Durometer D | 55                    |
|--------------------------------------|-----------------------|
| Refractive Index                     | 1.5                   |
| Water Absorption, ISO 62, %:         |                       |
| 2 hours in boiling water             | 2.61                  |
| Elongation, at break, ISO 527, %     | 265                   |
| Tensile Modulus, ISO 527             | N/mm <sup>2</sup> 297 |
|                                      | (psi) (43000)         |
| Tensile Strength, at break, ISO 527  | N/mm <sup>2</sup> 18  |
| -                                    | (psi) (2600)          |

## **Electrical properties**

| Surface Resistivity, IEC 60093,Ω cm          | $9.0 \times 10^{14}$ |
|--|----------------------|
| Volume Resistivity, IEC 60093, Ω cm          | $8.7 \times 10^{14}$ |
| Dielectric Breakdown Strength, IEC 60250     | ), kV/mm 25          |
| Dielectric Constant / Dissipation Factor, IE | EC 60250:            |
| 100-Hz                                       | 5.39 / 0.05          |
| 1-kHz  | 5.23 / 0.02          |
| 1-MHz  | 4.86 / 0.04          |

#### **Performance of Cured Material**

Cured @ 30  $mW/cm^2$  @ 365 nm for 80 seconds using a metal halide light source

Lap Shear Strength, ISO 4587:

Polycarbonate:

0.5 mm gap  $N/mm^2$  11.7 (psi) (1,700)

#### **Environmental Resistance**

Cured @ 30 mW/cm² @ 365 nm for 80 seconds using a metal halide light source Lap Shear Strength, ISO 4587:

Polycarbonate

### **Chemical/Solvent Resistance**

Aged under conditions indicated and tested @ 22 °C.

|                 |       | % of initial strength |      |       |
|-----------------|-------|-----------------------|------|-------|
| Environment     |       | 2 h                   | 24 h | 170 h |
| Boiling water   | 100°C | 75                    | -    | -     |
| Water immersion | 49°C  | -                     | -    | 60    |
| IPA immersion   | 21°C  | -                     | 95   | -     |
| Heat/humidity   | 38°C  | -                     | -    | 80    |

#### **Heat Aging**

Aged at temperature indicated and tested @ 22 °C Lap Shear Strength, ISO 4587, % of initial strength:

Polycarbonate:

| Aged @ 71°C  | for 170 hours | 100 |
|--------------|---------------|-----|
| Aged @ 71°C  | for 340 hours | 100 |
| Aged @ 93°C  | for 170 hours | 100 |
| Aged @ 93°C  | for 340 hours | 100 |
| Aged @ 121°C |               | 75  |
| Aged @ 121°C |               | 50  |

#### **General information**

This product is not recommended for use in pure oxygen and/or oxygen rich systems and should not be use with chlorine or other strong oxidising materials.

For information on the safe handling of this product, consult the Material Safety Data Sheet, (MSDS).

Where washing systems are used to clean the surfaces before bonding, it is important to check the compatibility of the washing solution with the adhesive. In some cases these solutions can affect the cure and performance of the adhesive.

#### **Precaution**

- 1. Use with proper ventilation. Avoid contact with skin and eyes.
- 2. If contact with skin occurs, rinse with warm water and soap.
- 3. If adhesive gets into eye, keep eye open and rinse thoroughly. Seek medical attention immediately.
- 4. Keep well out of reach of children.

## Storage

Keep adhesive in a cool, dry place optimal storage 8°C-28°C. is recommended unless otherwise labelled. To prevent contamination of unused material, do not return any product to its original container. For specific shelf life information, contact Cartell . Avoid direct sunlight
